

Module Name: JAVA Logic Placement Preparation Test 10

Batch: PG-DAC

Q.1) Write a function named "remove duplicates" that takes an array of integers in random order and eliminates all the duplicate integers in the array. The function should take two arguments:

(1) An array of integers

(2) An integer that tells the number of cells An array

'a': The integer array of numbers

'n': The number of integers An the array

RETURNS:

The function should not return a value, but if any duplicate integers are eliminated, then array is restructured such that the unique value precedes repeated values.

EXAMPLE: If input is

int a[11]=(58,26,91,26,70,70,91,58,58,58,66)

Revised array:

A [11] 58 26 91 70 66 70 91 58 58 58 66)
